

# Easy Setup Guide

## Connect the Hub 5 to your existing Xplornet Modem

**Disconnect** your computer or any existing router from the Xplornet Modem.

- 1 Plug one end of the red cable into the **LAN** port on the Modem and the other to the red **WAN** port on the Hub 5 router.
- 2 If using a computer, take the yellow cable and connect one end to the Whole Home Wi-Fi unit in either one of the two yellow **LAN** ports and the other end to your Computer's **Ethernet** port. If not using a computer, skip this step.
- 3 If using Xplornet Home Phone, connect your telephone by attaching one end of the green RJ-11 cable to the Phone1 port of the Xplornet Hub 5 router and the other end to your **telephone base unit**.
- 4 Connect the small black power adaptor cord into the **Power** port on the Hub 5 router and then plug the other end of the adaptor into a 120-volt household outlet.
- 5 Power on your Xplornet Hub by pressing the On/Off button on the back of the device.

## Setting up your devices:

Go to [www.myxplornet.com](http://www.myxplornet.com) and enter your user Name and Password to activate or login to your account.

For more help on setting up your Hub 5 router, activating your Xplornet Home Phone Service, or setting up your Whole Home Wi-Fi service, go to [www.xplornet.com](http://www.xplornet.com) and navigate to the [Support | Getting Started](#) section.
